

Ukrop's Turkey Dinner

Heating Instructions

Conventional Oven (recommended):

Turkey Dinner:

Heat approximately 1 hour 45 minutes

Preheat oven to 350°F. Remove turkey from package and place breast side up in a roasting pan with a depth of at least 2 inches. Pour 1 cup chicken broth or water in the bottom of the pan. Cover loosely with aluminum foil, crimping to edge of pan. Heat in oven for 1 hour. Uncover and baste with pan juices and butter or margarine, if desired. Re-cover with foil and return turkey to oven.

Remove plastic lids and cover Cornbread Dressing, Sweet Potato Casserole, and Seasoned Green Beans loosely with aluminum foil. Place on a baking sheet and add to oven with turkey. Continue heating for approximately 45 minutes (remove foil from turkey and side dishes for the final 10 minutes of heating).

Remove White House Roll Clusters from plastic packaging and cover tray loosely with aluminum foil. Heat for final 10 minutes of turkey and side dish cycle.

During final 10 minutes, heat gravy on stove top by emptying contents into a saucepan and heating over medium heat to desired serving temperature.

Microwave:

Slice turkey into serving size portions and place into a microwave-safe dish. Top with turkey gravy or broth, if desired. Cover loosely with a paper towel and heat at 80% power for approximately 2-3 minutes per pound. Times will vary with power of microwave and amount being heated. For exact time, consult microwave manual. Do not overheat.

Side Dishes: Containers are microwave safe. Remove plastic lids from the Cornbread Dressing, Sweet Potato Casserole, and Seasoned Green Beans; cover loosely with a paper towel. Microwave containers separately at 80% power for approximately 4-6 minutes or until desired serving temperature is reached. **Allow side dishes to rest 30 seconds before handling.**

Gravy: Container is microwave safe. Vent lid on gravy container. Microwave at 80% power for approximately 2-4 minutes or until desired serving temperature is reached. Stir gravy occasionally during heating to ensure even heating.

White House Roll Clusters: Remove from plastic packaging. Cover tray loosely with a paper towel and microwave at 80% power for approximately 30 seconds or until warm. Do not overheat.

Leftovers: Any leftovers should be promptly refrigerated. A general recommendation is to refrigerate within 2 hours of removal from oven.
